

Project Identification

Project Name:

Pharmacy Management & inventory system

Current Problem:

- 1- Difficulty in finding specific medicines quickly.
- 2- Medicines arranged randomly or improperly stored.
- 3- Difficulty in tracking stock levels and expiration dates manually.
- 4- Risk of financial losses due to expired or misplaced medicines.

Description about project:

- The system can find the required medicine easily by entering its barcode, commercial name, or active ingredient. It enables the pharmacist to complete sales, track inventory, and manage purchases efficiently. The system automatically organizes medicines by category, tracks expiration dates to prevent selling expired items, and monitors stock levels to alert when supplies are low. This ensures faster service, reduces human error, and improves pharmacy inventory control.

Feasibility Analysis

Technical Feasibility

- 1- Tech Stack & Interface: Designed using HTML, CSS, and JavaScript for the frontend/web interface.
- 2- Development Tools: Built using IDEs like Visual Studio or VS Code.
- 3- Connectivity: Works online (cloud-based) or offline with local database syncing.
- 4- Platform Compatibility: Operates seamlessly on standard operating systems such as Windows and Android.

Economic Feasibility

- 1- The project increases profitability by reducing medicine waste and streamlining sales.
- 2- Reduces financial loss caused by selling expired or untracked stock.
- 3- Cost of development is low and cost-effective relative to long-term operational savings.
- 4- Flexible payment and billing system integrated for customer transactions.

Organizational Feasibility

Organizational Feasibility Analysis includes the assessment of:

- 1- Management prowess: Ability of the initial management and pharmacy staff to operate the system efficiently with minimal training.

- 2- Resource sufficiency: Availability of necessary non-financial resources such as hardware (computers/tablets, barcode scanners, printers), reliable internet connection, and technical support.

System request

System request _____ pharmacy system	
Project sponsors	Menna moheb , zenab elsayed , Maraim Hany , Amany Morad
Business Need :	1- Reduce the loss and expiration of medicines. 2- Dispense with paper records and manual logs. 3- Make medicine information available to everyone. 4- Make system available all the time for fast sales.
Business Requerments :	1- Update system stock in real-time. 2- Provide online access for remote inventory checks. 3- IT unit support and barcode scanner integration. 4- Automated expiration alerts and re-order notifications.
Business Value :	1- Providing accurate medicine information. 2- Saving time during billing and search. 3- Saving cost by reducing stock waste. 4- Saving efforts for pharmacists and staff.
Business Issue or Constraints :	1- Deadline in 1 January. 2- Constantly updating expiration dates and medicine database.
